- Useful for all ages & cultures
- **Engages examinees with special needs and the physically challenged who cannot draw or use a writing instrument**

Automated Operation

SpecialtyAutomated™ introduces the first and only fully computerized Clock Drawing Test, one of the most widely used cognitive assessment tests. This test is designed to save driver's license departments significant time, labor, and expense to rapidly screen and monitor drivers for brain impairment and dementia. Instant scores, reports, statistics, and feedback are provided through this unique online and web-based application. All tests are accessible through networked laptops, portable kiosks, or PCs.

Automation of this test effectively reduces wait time and costs associated with manual administration, semi-computerization, and use of other cognitive tests. No other automated cognitive test offers a self-service option. No other visual attention assessment is as sensitive as the Automatic Clock Drawing Test™.

Automatic Clock Drawing Tests™ offer great potential for fitness-to-drive evaluations to reduce crashes and high-profiled tragedies involving dementia drivers. This tool ensures that drivers of all ages, cultures, and backgrounds will be screened and treated fairly and equally.

Start screening and monitoring drivers now using the Automatic Clock Drawing Test™, ACDT-DMV-07.
